

**NYC X TALENTGEIST – STRATEGIC PROJECT TO DIGITISE SMES IN
SINGAPORE**

**QR ORDERING & QUEUE MANAGEMENT SYSTEM FOR
BEST SATAY 7 & 8 @ LAU PA SAT**

PRESENTED BY -EI MYAT MOE OO

SEPTEMBER 2025

**MOCK-UP WEBSITE: -EI MYAT MOE OO
([HTTPS://ORDERINGSYSTEMWSPPROJECT.ODOO.COM](https://orderingsystemwspproject.odoo.com))**

EXECUTIVE SUMMARY

Satay Street @ Lau Pa Sat is a heritage-rich cluster of hawker stalls located in Singapore's CBD, drawing both locals and tourists nightly. Despite its popularity, operations remain fully manual: customers queue, order, pay, and wait—leading to congestion, lost sales, and inconsistent customer experiences.

To address these challenges, this project focuses specifically on **Best Satay 7 & 8 satay stall 7 & 8**, two of the most popular stalls on Satay Street. Due to their high demand, these stalls often face some of the longest queues, resulting in customer frustration and potential revenue loss. To improve efficiency and enhance the dining experience, we propose developing a digital ordering system that allows customers to place their **orders online or via QR scan**, reducing queue times and streamlining stall operations.

This project proposes a 12–18 month digital transformation roadmap using the Odoo Website Builder to introduce an online ordering system with QR code integration and queue management for Stalls 7 & 8. Customers will simply scan a QR code, browse the stall’s menu online, place and customize their orders digitally, and receive a queue number they can track in real time—minimizing waiting time and improving dining convenience.

Quantifiable Targets (within 12 months):

- **20% increase in combined revenue for Stalls 7 & 8 through reduced walkaways.**
- **50% reduction in customer waiting complaints due to digital queue tracking.**

By implementing this QR-enabled online ordering platform, Stalls 7 & 8 will position themselves as digital pioneers within Satay Street, providing a scalable model that other stalls can later adopt.

BACKGROUND

- **SME Status:** Both stalls are SMEs, each managed by small teams with limited staff and resources.
- **Challenges:**
 - Long queues during peak hours (30+ minutes).
 - Limited digital visibility—dependent on physical walk-ins.
 - Missed opportunities to engage tourists seeking convenience.
- **Opportunities:**
 - Shared QR ordering reduces congestion.
 - Digital menus highlight variety (chicken, beef, mutton, prawns).
 - Heritage branding **can be strengthened with modern convenience.**

METHODOLOGY

AGILE FRAMEWORK

WHY AGILE METHODOLOGY?

The Agile methodology is a project management approach based on iterative development, rapid feedback, and continuous improvement. Instead of delivering a large, finished product at the end of the project (as in the traditional Waterfall model), Agile delivers smaller, functional increments in short cycles called sprints.

WHY CHOOSING AGILE METHODOLOGY FOR THIS PROJECT?

For SMEs like hawker stalls, Agile is the ideal methodology because:

- **Low Risk:** It avoids long upfront investments by starting small with pilot stalls before scaling up.
- **Flexibility:** Features (e.g., menus, payment systems, queue tracking) can be adjusted quickly based on hawker and customer feedback.
- **Customer-Centric:** Continuous feedback loops ensure the digital solution is practical, user-friendly, and aligned with real needs.
- **Scalability:** New features such as loyalty programs and analytics dashboards can be added in later iterations without disrupting earlier work.
- **Faster Adoption:** Quick, visible results (like QR ordering pilots) help build hawker trust and reduce resistance to digitalization.

WHY CHOOSING AGILE METHODOLOGY FOR THIS PROJECT?

Agile Lifecycle (Stalls 7 & 8):

1. Plan – Engage stall owners, identify pain points.
2. Design – Wireframe menus & queue flow.
3. Develop – Pilot Odoo website + QR system for both stalls.
4. Test – Gather customer & hawker feedback.
5. Deploy – Launch live system; integrate queue display.
6. Review – Monitor sales dashboards, refine UX, add multilingual menus.

IMPLEMENTATION TIMELINE (PHASED ITERATIONS)

- **Iteration 1 (0–3 months):** Pilot website + QR ordering for Stalls 7 & 8.
- **Iteration 2 (3–6 months):** Queue system + Google/TripAdvisor setup.
- **Iteration 3 (6–12 months):** Loyalty programme, delivery integration.
- **Iteration 4 (12–18 months):** Multilingual menus, analytics dashboards.

PROJECT GOALS

Digitally transform Satay Stalls 7 & 8 by building a centralised Odoo-powered system to:

- Reduce queues and enhance customer experience.
- Increase stall revenue through faster order turnover.
- Provide hawkers with sales analytics.
- Strengthen Lau Pa Sat's reputation as both a heritage icon and digital-ready food hub.

PROJECT SCOPE

IN-SCOPE (PHASE 1 – STALLS 7 & 8):

- Odoo Website with individual menus & QR ordering.
- Queue number system (mobile + display screens).
- Eat Here or Takeaway option.
- Integration with local payments (PayNow, GrabPay, credit/debit cards).
- Google Business & TripAdvisor listings for both stalls.
- Future Add-ons: loyalty programme, delivery partnerships, analytics dashboards.

OUT OF SCOPE

- Table delivery service (self-collection continues).
- Full mobile app development (explored later).
- Street-wide rollout (limited to stalls 7 & 8 initially).

CUSTOMER FLOW DIAGRAM

STRATEGY:CLAP FRAMEWORK

C – CLARIFY & CONTEXTUALIZE THE PROBLEM

Clarify

- **Problem:** Satay Stalls 7 & 8 continue to operate with fully manual processes—customers must queue, order, pay, and wait near the counter. During peak hours (7–9 PM), waiting times can exceed 30 minutes, leading to overcrowding, congestion, and lost sales from customers who walk away. In addition, both stalls have little to no online presence, making it difficult to attract digitally savvy customers or capture tourist demand beyond physical walk-ins.
- **Customer feedback:** Reviews highlight that while the satay is delicious and authentic, the overall dining experience is negatively impacted by the long queues and the lack of menu visibility before reaching the counter. Customers often mention that they would prefer an easier way to order and track waiting times.

C – CLARIFY & CONTEXTUALIZE THE PROBLEM

Contextualize

- **Heritage vs. Modern Expectation:** Stalls 7 & 8 benefit from Lau Pa Sat's reputation as a heritage-rich hawker destination, but they also face pressure to modernize. Tourists and younger customers increasingly expect QR-enabled ordering, digital menus, and cashless payments as the new standard in Singapore's F&B industry.
- **Competitive Landscape:** Other hawker centres and food courts in Singapore are beginning to adopt digital ordering systems, which enhance efficiency and improve customer satisfaction. Without adopting similar practices, Stalls 7 & 8 risk falling behind competitors who can provide faster service and convenience.
- **Business Impact:** The absence of a digital system not only creates long queues but also prevents stalls from collecting valuable sales and customer data. This limits opportunities for promotions, loyalty programmes, and better business decision-making.

FEEDBACK & REVIEWS (TRIPADVISOR):

In reviews across TripAdvisor, Reddit, and food forums, customers frequently praise the authentic taste and quality of the satay, often describing Stalls 7 & 8 as a “must-try” at Lau Pa Sat. However, many also note that the stalls’ popularity leads to long queues, sometimes up to an hour, especially during peak evening hours. Several visitors mention that while the food is worth the wait, the ordering process is slow and congested, suggesting that a more efficient system could greatly enhance the overall dining experience.

ANALYSE (DEEP DIVE INTO ROOT PROBLEMS)

Based on reviews, site observation, and benchmarking:

Customer pain points:

- Queues discourage orders and create overcrowding.
- Menus are hard to view across stalls → discourages variety-seeking.
- Inconsistent wait times (>30 minutes) frustrate customers.

• **Market drivers:**

- Singapore F&B is rapidly moving toward QR ordering & cashless payments.
- Tourists expect convenience, digital menus, and multilingual support.

• **Competitive landscape:**

- No other satay stall on Satay Street currently offers a full QR-based ordering and queue management system, giving Stalls 7 & 8 a strong competitive edge as digital pioneers.

• **Business pain points:**

- Lost sales from walkaways due to queues.
- Lack of consolidated data (stall sales, peak times, popular dishes).
- No digital marketing channel → total reliance on physical footfall.

• **Deprioritised issues:**

- Food quality and branding were praised in reviews; the main pain points are service flow and customer experience.
- Thus, focus is on ordering efficiency + digital visibility, not recipe changes.

LIST (POTENTIAL SOLUTIONS)

- Odoo-powered online ordering website with QR codes at tables and stall front.
- Digital queue management with real-time tracking on both mobile and display screens.
- Google Business & TripAdvisor integration to increase online visibility and reviews.
- Loyalty programme (points, repeat-visit discounts) to encourage customer retention.
- Delivery integration (GrabFood/Foodpanda) to expand sales beyond walk-ins.
- Analytics dashboards for sales tracking, top-selling dishes, and customer insights.

P R I O R I T I S E :

- Phase 1 (0–6 months): Website, QR ordering, queue display.
- Phase 2 (6–12 months): Loyalty + delivery integration.
- Phase 3 (12–18 months): Multilingual menus, analytics dashboards.

EXECUTION (ODOO WEBSITE BUILDER)

- **Landing Page:** Hero banner with “Satay Stall 7 & 8 – Authentic Flavours, Unforgettable Taste.” Customers can immediately click Order Now to begin.
- **Menu Page:** Chicken, Beef, Mutton, Prawn satay, plus Rice Cakes. Each item displayed with descriptions and prices.
- **Checkout:** Options for Eat Here or Takeaway, integrated with PayNow, GrabPay, and card payments.
- **Queue Tracking Page:** Customers receive an order confirmation and digital queue number with real-time status updates (Preparing / Ready for Collection).
- **Admin Dashboard (Hawkers):** View all incoming orders instantly, track top-selling skewers, monitor peak hours, and generate daily sales reports.

LIVE DEMO – EXPERIENCE THE ORDERING SYSTEM

Now, instead of waiting in a long queue, customers can simply scan this QR code. It takes them directly to our live Odoo ordering system, where they can browse the menu, place an order, and track their queue number in real time

THE LIVE ODOO
ORDERING
WEBSITE
PROTOTYPE*

DESKTOP & MOBILE ORDERING EXPERIENCE

The mock-up Odoo website design for Satay Stalls 7 & 8 shows how customers will experience the system after scanning the QR code .

- **Seamless access:** Once the QR code is scanned, customers are taken directly to this ordering page.
- **Mobile-first design:** A clear “Order Now” button and simple navigation make it easy for tourists and locals to place orders instantly.
- **Desktop view:** Highlights stall branding, story, and satay menu — ideal for group browsing or advance orders.
- **Consistent experience:** Whether on mobile or desktop, customers can quickly view menus, place orders, and pay without queueing.

This design ensures convenience, accessibility, and a modern digital touch while keeping the heritage satay experience intact

INCLUDING STORE LOCATION & OPENING HOURS FOR CUSTOMER CONVENIENCE

The website footer clearly displays stall location and daily operating hours, ensuring customers can easily find when and where to visit Satay Stalls 7 & 8.

REVENUE GROWTH & BUSINESS IMPACT

After implementing the digital ordering and queue system:

- Sales revenue for Stalls 7 & 8 is expected to grow significantly due to reduced walkaways and faster service turnover.
- With improved efficiency and higher customer satisfaction, both stalls can achieve sustained long-term revenue growth.
- Digital transformation will not only boost immediate sales but also strengthen the stalls' ability to attract tourists and repeat local customers.

 Overall Impact: Digital ordering ensures higher revenue, reduced waiting complaints, and a stronger market position within Satay Street.

BRANDING & MARKETING

Positioning:

- “The first heritage satay stalls with QR ordering at Lau Pa Sat”
- Blend authentic tradition with modern convenience → a unique selling point for both locals and tourists.

• Target Audience:

- Tourists: Looking for a smooth, modern dining experience in a heritage setting.
- Locals & Office Crowd: Want quick service during peak hours.
- Repeat Customers: Attracted through loyalty rewards and promotions.

• Campaign Tagline:

✨ “Scan. Order. Savor. – Satay Made Simple at Stalls 7 & 8.”

• Marketing Channels:

- Google Business & TripAdvisor: Boost visibility with high-quality photos, QR code links, and positive reviews.
- Instagram & TikTok: Showcase satay-making videos, behind-the-scenes stories, and customer experiences using hashtags (#BestSatay #LauPaSatQR).
- Onsite Promotions: Table tents, posters, and banners saying “Scan to Order, Skip the Queue.”
- Digital Word of Mouth: Encourage customers to share their satay experience online with discount codes for posting/tagging.

• Campaign Ideas:

- “Satay in Seconds” Launch Promo: 10% off for first QR code orders.
- Tourist Specials: Multilingual posters + bundle deals (e.g., 10 sticks + rice cakes).
- Loyalty Programme: Free sticks after 5 QR orders.
- Heritage + Digital Storytelling: Share stall history + digital transformation journey online for brand differentiation.

CONCLUSION AND FUTUTE PLAN

Conclusion

- Satay Stalls 7 & 8 are positioned as the first heritage satay stalls at Lau Pa Sat to adopt digital ordering.
- The project directly addresses customer pain points: long queues, slow service, and limited visibility.
- With the Odoo-powered online ordering and queue system, customers enjoy faster service, convenience, and a modern dining experience without losing the heritage charm.
- This pilot can serve as a scalable model for the rest of Satay Street.

CONCLUSION AND FUTUTE PLAN

Future Plan (Agile Implementation)

- **Phase 1 (Now – Mockup Stage):**
 - Online ordering website with QR code access (design prototype ready).
 - Core satay items (Chicken, Beef, Mutton, Prawns, Rice Cake) available via QR ordering.
- **Phase 2 (Next 3–6 months):**
 - Develop queue tracking system (mobile + display screen integration).
- **Expand digital menu to include:**
 - Catering packages – pre-order satay for events.
 - Combos – satay sets with rice cakes & drinks.
 - Desserts & Drinks – partner items for upselling.
 - Sauces & Sides – customization options.
 - Specials – seasonal promotions & limited-time offers.
- **Phase 3 (6–12 months):**
 - Launch loyalty programme to increase repeat customers.
 - Integrate with delivery platforms for off-site sales.
- **Phase 4 (12–18 months):**
 - Add multilingual menus for tourists.
 - Deploy advanced analytics dashboards.
 - Refine UX based on continuous customer & hawker feedback.

AGILE APPROACH:

- Iterative Rollout: Each phase is delivered in sprints, tested with customers, and improved through feedback.
- Continuous Improvement: Regular reviews and adjustments ensure scalability and customer satisfaction.
